

Public Exhibition

BH EnergyGap will be submitting a new planning application this winter to develop a Resource Recovery and Renewable Energy Production Facility (The 3Rs) at Fryers Road, Birchills Leamore, Walsall.

The UK has landfill reduction targets and there is ever more pressure on business to ensure its waste is properly recycled and processed and not sent directly to landfill. There is, therefore, a real shortage of facilities to support the local business community in avoiding sending its waste to landfill.

This facility will safely process waste. Materials, such as metals, plastics and rubble, will be sorted and segregated to recover their value for onward recycling using the latest sorting technology such as magnets, eddy currents, near infrared cameras and air jets. The residual materials will be used to produce energy using advanced thermal treatment.

The resulting gas will be used to produce electricity for export from the site. All activities will provide a sustainable alternative to fossil fuels and primary materials.

We will be holding a public exhibition for local people to find out more and express their views on the plans proposed for the Fryers Road site ahead of the planning application being finalised.

The exhibition will be held at the Mirus Academy school, (previously Frank Harrison Engineering College), Willenhall Road entrance, Birchills Leamore Industrial Estate, Walsall on:

Friday 26/10/2012 from 3pm – 7pm

Staff will be on hand at all times to welcome residents and answer any questions.

Recovering Resources for Walsall
